

Does the Corn Rootworm Resistance Trait Affect N Use Efficiency?

Fluid Fertilizer Forum

February 22, 2011

Carrie Laboski, Todd Andraski, Joe Lauer

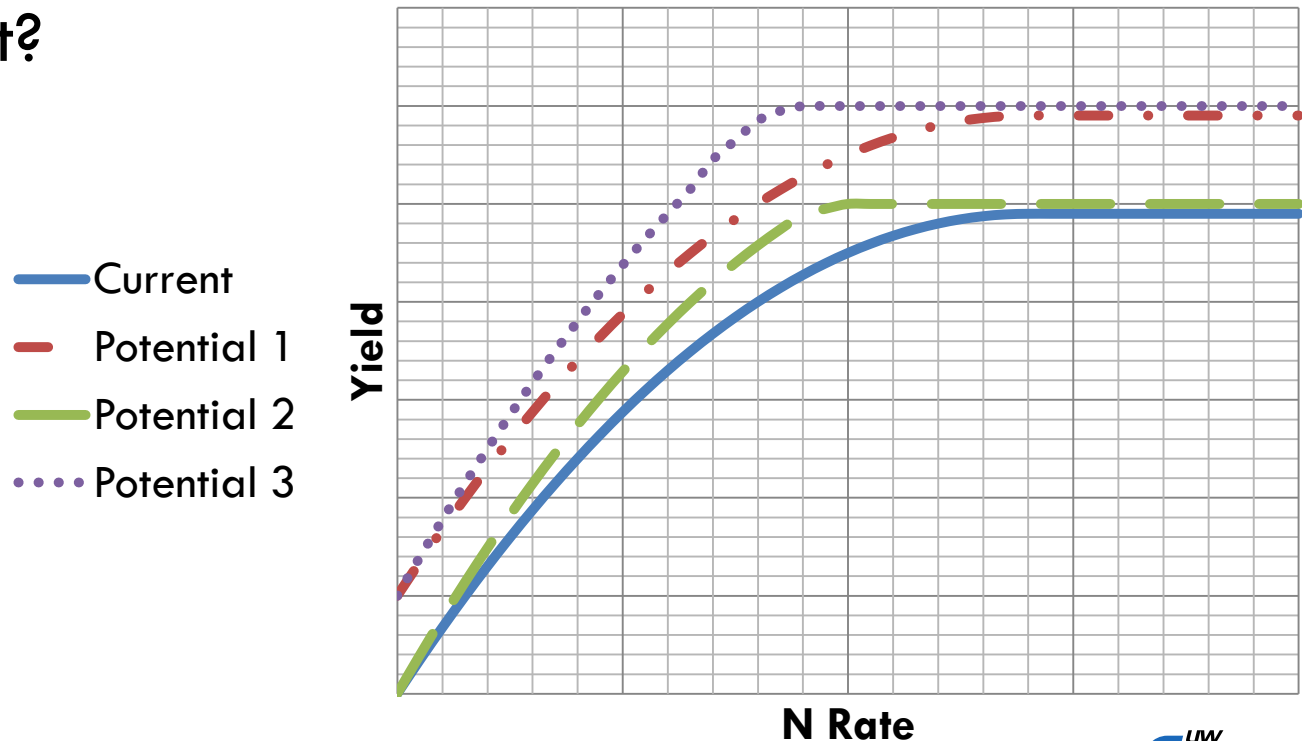

DEPARTMENT OF
SOIL SCIENCE
University of Wisconsin-Madison

^{UW}
Extension

Background

- CRW hybrids have larger root system if not stressed by CRW larval feeding
 - Is more N needed to feed a larger plant, or is less N needed because the root system is more efficient?

Objective:

- To determine if corn hybrids with a transgenic CRW resistant gene vary in their NUE and N need compared to non-resistant hybrids

Methods & Materials

Site background info.

- Previous crop = corn grain
- Spring chisel & soil finisher
- Plano silt loam (Typic Argiudoll)

| Soil Test | 2008 | 2009 | 2010 |
|--------------|----------------|---------------|---------------|
| P, ppm | 107 (EH) | 33 (EH) | 91 (EH) |
| K, ppm | 347 (EH) | 163 (VH) | 146 (H) |
| pH | 7.1 | 6.9 | 7.1 |
| OM, % | 4.1 | 3.2 | 3.5 |
| PPNT, lb N/a | 69 (19 credit) | 12 (0 credit) | 37 (0 credit) |

Experimental design

- N x hybrid in a full factorial – CRD
 - 4 replications
- 6 N rates
 - 0 – 200 lb/a in 40 lb/a increments
 - Applied 11, 23, or 27 day after planting
- 8 Hybrids

Hybrids

| Hybrid | Hybrid i.d. | Brand | Hybrid | CRM | Traits |
|--------|-------------|---------|----------|-----|--|
| 1 | Bt-CR 1 | Pioneer | P35F44 | 105 | (CB & CRW) Herculex Xtra, Roundup Ready 2, Liberty Link |
| 2 | Isoline 1 | Pioneer | P35F37 | 105 | Roundup Ready 2 |
| 3 | Bt-CR 2 | DeKalb | DKC52-59 | 102 | (CB & CRW) Yield Guard VT3, Roundup Ready |
| 4 | Isoline 2 | DeKalb | DKC52-62 | 102 | Roundup Ready 2 |

| Hybrid | Hybrid i.d. | Brand | Hybrid | CRM | Traits |
|--------|------------------------|-----------------------|---------------|-----|---|
| 5 | Standard Bt-CB | Northrup King (08/09) | N58-D1 | 107 | (CB) Yield Guard |
| | | Renk (10) | RK670 | 103 | (CB) Yield Guard |
| 6 | Standard nontransgenic | Pioneer (08) | 35A30 | 106 | None |
| | | Pioneer(09/10) | 35F38 | 105 | None |
| 7 | Bt-CR (Mon863) 1 | Renk (08) | R698RRYGRW | 104 | (CRW) Yield Guard Roundup Ready |
| | | DeKalb (09/10) | DKC55-4 (VT3) | 105 | (CB & CRW) Yield Guard VT3, Roundup Ready |
| 8 | Bt-CR (Mon863) 2 | Dairyland | ST400 | 106 | Roundup Ready, CRW |

Plot details

- **Planting**

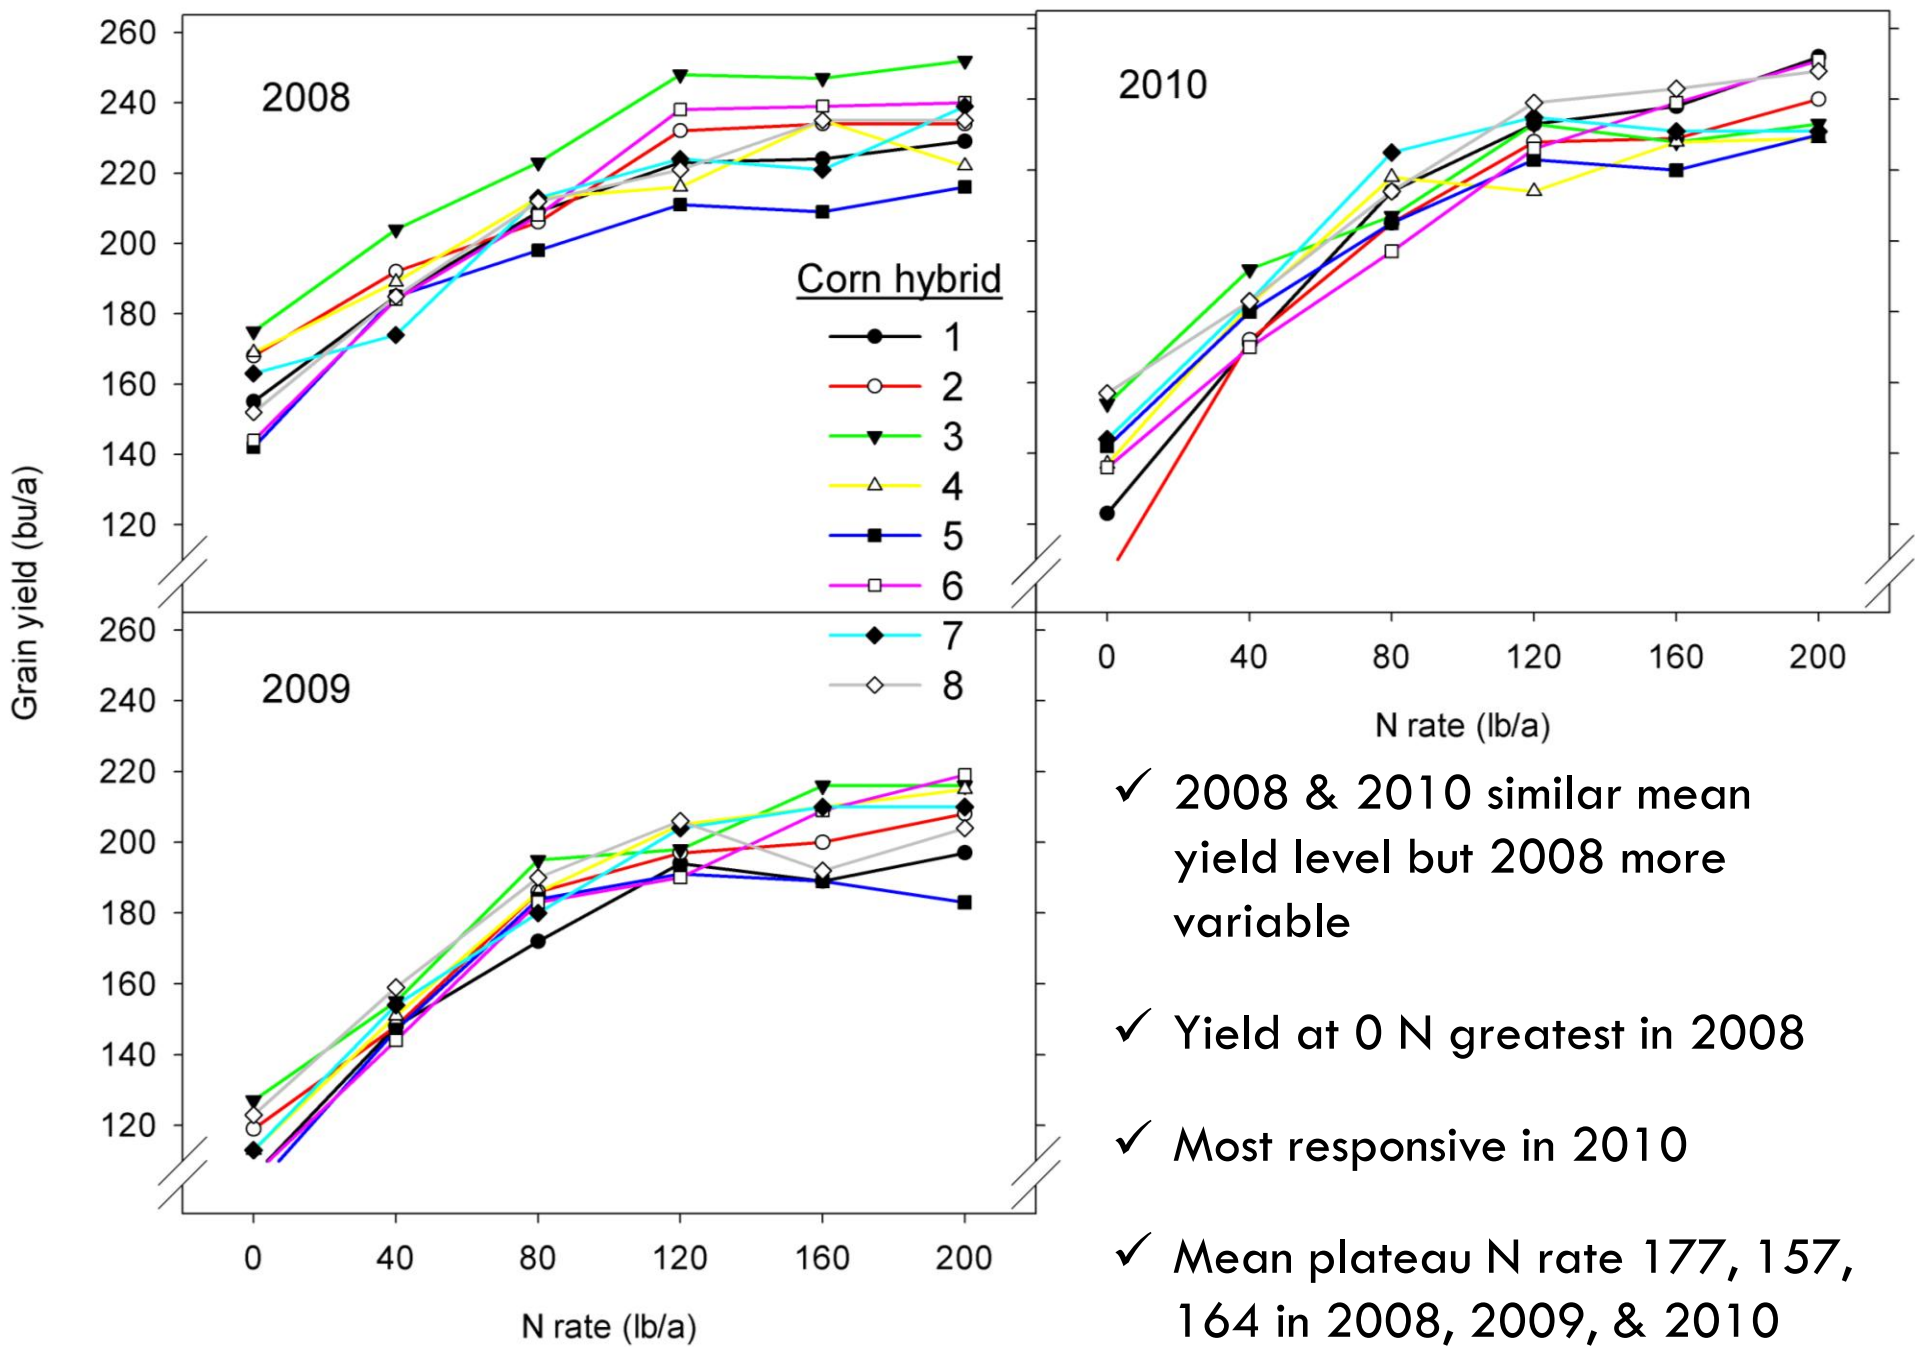

- May 5, 2008; May 12, 2009; May 5, 2010
- 33,600 seeds/a or 36,670 seeds/a
 - Thinned to 30,500 or 34,294 at V4-V5
- 3 gal/a 10-34-0 in furrow in 2008
- 4.4 lb/a insecticide in T-band (Fenitrothion)
 - To all plots
 - Border area - no insecticide

| Date | Root injury rating in border; 0-3 node-injury scale |
|---------|---|
| 7/24/08 | 1.12 |
| 7/27/09 | 0.19 |
| 7/26/10 | 1.50 |

- **Weather**

- 2008: Wet June; cool all-season
- 2009: somewhat dry; cold
- 2010: June & July wet; somewhat warmer July & Aug.

Results

N use efficiency definitions

- Relative yield (RY)
 - $(\text{Yield at 0 lb/a} \div \text{Yield at 200 lb/a}) \times 100$
- Partial factor productivity (PFP)
 - $\text{bu/a} \div \text{lb/a N fertilizer}$
- Agronomic N fertilizer efficiency (ANFE)
 - $\Delta \text{bu/a} \div \text{lb/a N fertilizer}$

N use efficiency definitions

- Internal N Use Efficiency (INUE)
 - $bu/a \div lb/a$ N uptake
- Physiological Efficiency (PE)
 - $\Delta bu/a \div \Delta lb/a$ N uptake
- Fertilizer N Recovery Efficiency (FNRE)
 - $\Delta lb/a$ N uptake \div lb/a N fertilizer

Effect of isoline on RY, PFP, and ANFE

| Hybrid | Relative Yield ₂₀₀ | | |
|----------|-------------------------------|------|------|
| | 2008 | 2009 | 2010 |
| | ----- % ----- | | |
| 1 | 68a | 54b | 49b |
| 2 | 72a | 56b | 44c |

| 3 | 70 | 60 | 66 |
| 4 | 74a | 53b | 60b |
| <i>p</i> | ns | ns | ns |

For a given measure of NUE, values in each row followed by the same letter are not significantly different at the 0.10 probability level.

p values compare an isoline pair in each year. ns = not significant; * = $p < 0.10$.

Effect of isoline on RY, PFP, and ANFE

| Hybrid | Relative Yield ₂₀₀ | | | Partial Factor Productivity ₁₆₀ | | |

| | --- bu/lb N uptake --- | | | -- Δbu/Δlb N uptake -- | | | Δlb N uptake/ lb N fert. | | |
| 1 | 1.01b | 1.06a | 0.94c | 0.81 | 0.92 | 0.87 | 0.58 | 0.59 | 0.66 |
| 2 | 1.03b | 1.07a | 0.92c | 0.95 | 0.95 | 0.87 | 0.52b | 0.61b | 0.74a |
| p | ns | ns | ns | ns | ns | ns | ns | ns | ns |

For a given measure of NUE, values in each row followed by the same letter are not significantly different at the 0.10 probability level.

p values compare an isolate pair in each year. ns = not significant; * = p<0.10.

N response CRW vs non-CRW hybrids

| Year | Yield at 0 N | | Yield at plateau N rate | | Plateau N rate | |
|------|--------------|---------|-------------------------|---------|----------------|---------|
| | CRW | non-CRW | CRW | non-CRW | CRW | non-CRW |
| | bu/a | | bu/a | | lb N/a | |
| 2008 | 161 | 154 | 235 | 228 | 152 | 139 |
| 2009 | 115 | 110 | 206 | 206 | 160 | 164 |
| 2010 | 145* | 130* | 240 | 234 | 165 | 154 |

* CRW and non-CRW hybrids are significantly different for Yield at 0 N in 2010.

When averaged overall years, Yield at 0 N for non-CRW hybrids is significantly less than CRW hybrids.

Summary

- CRW traited hybrids are more efficient in using mineralized soil N in 0 N plots
- However, this does not translate to significantly greater yield levels when fertilized or different N needs
